COVID-19 is a virus which has serious effects which debilitates those who have caught it and causes immense distress both physically and mentally. The UK has suffered huge fatality rates.

The virus spreads mainly from person-to-person.

- Between people who are in close contact with one another
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- COVID-19 can be spread by people who are not showing symptoms. An infected person can pass on the virus through talking, breathing, coughing, or sneezing even if they do not have any symptoms.
