

Design and Technology

Statement 2026:

To prepare for the introduction of a new curriculum in Spring 2027, we are developing our curriculum to align with the proposed changes. The new priorities will continue to shape our curriculum to ensure best practice across the provision in our school.

New priorities will include user-centred design; sustainability and environmental impact; iterative design; real-life contexts and problem solving; progression of knowledge; and inclusive design and accessibility.

The action plan of the Design and Technology Co-ordinator will reflect the necessary actions to meet the upcoming changes.
